

WATER & WASTES DIGEST

The Solutions Source of the Water & Wastewater Industry

2008 State of the
Industry Report
2009 Forecast

INDUSTRY FORECAST

Alan Davis
President
Hungerford & Terry

In 2009, Hungerford & Terry celebrates 100 years of state-of-the-art water treatment systems. During this time, we have witnessed two World Wars, a stock market crash and numerous other social upheavals. Back in 1909, we billed ourselves as "filtration engineers" and specialized in the "purification of highly polluted water for manufacturing purposes." We transitioned into the heyday of

ion exchange with high-purity boiler makeup systems.

Today, our business centers on drinking water systems and our specialties include the removal of iron, manganese, arsenic and nitrates.

Despite the current volatile economic climate, we remain bullish about the future and convinced that providing the necessary clean water to meet the added growth of two to four billion more people by 2050 is essential. **WWD**
