CLIENT: Hungerford & Terry, Inc. **FOR IMMEDIATE RELEASE**

Hungerford & Terry Delivers Two of the Five GAC Filters for the Buchman Direct Diversion Project for Santa Fe, New Mexico

Clayton, NJ - Shown are two of the five 12-foot diameter by 40-feet long horizontal, multi-cell GAC (granulated activated carbon) filters with a 3,000 cubic foot bed of GAC per filter. These filters, engineered by Hungerford & Terry, Inc. are for pretreatment to the membrane system that treats 15 million gallons of water per day for the residents and businesses in Santa Fe, New Mexico, City and County. This contract to Hungerford & Terry is reported to be $2.3 million dollars.

For this project, the City of Santa Fe, New Mexico and its surrounding areas are adding approximately 8,730 acre feet of surface per year in order to reduce their dependence on groundwater wells. The purpose of this project is to divert water from the Rio Grande River and deliver it underground to the water treatment plant.

Since 1909, Hungerford & Terry has designed and manufactured thousands of systems that incorporate both industry standard and unique water treatment technologies. H&T is a leading distributor of high-performance water filtration media, including GreensandPlus. Based in Clayton, NJ, USA, Hungerford & Terry has 30 sales representative organizations throughout the United States, as well as representatives in Canada, Mexico, and Asia.
